Notes:

- Proper image sizes, the page takes a very long time to load
- Worked on buttons: book buttons, like the page name should be highlighted with a color or something when you are on that book
- The page button, when on the page there will be a box around it, possibly a color that isn't as bright as white
- Responsive:
    - Title might need to be above or on the image with the body copy underneath the image. Because at the mobile when the nav bar isn't there you won't know what page you are on.
    - Everything goes to one column
